EDUCATION

Tecnológico de Monterrey (ITESM) | 2024 – Present

Bachelor Engineering Computer Technologies Engineering: GPA 93/100

Relevant coursework: Data Structures & Algorithms, OOP (C++ / Python), Networking & Device Interconnection, Software Engineering, Formal Languages & Computational Theory, Database Systems.

WORK EXPERIENCE

Intern — Frontend Developer — Jun/ Aug 2025

Bono, Mexico City

- Developed and iterated on React components within a production codebase, incorporating code review feedback to meet quality standards in a real engineering team.
- Participated in client calls, capturing requirements and translating non-technical feedback into concrete development tasks delivered within sprint deadlines.
- Acted as a bridge between the business and technical sides — ensuring client expectations were accurately reflected in the product without losing technical feasibility.

Administrative Team Member — Jun 2025/ Present

COPARMEX University Chapter, Tecnológico de Monterrey

- Led end-to-end execution of 3+ business networking events, directly managing speaker outreach, agenda coordination, and cross-team logistics across dedicated planning and operations teams.
- Served as the primary point of contact between speakers, university stakeholders, and internal coordination teams, ensuring alignment across all moving parts from planning to day-of execution.
- Drove cross-functional collaboration between academic and professional stakeholders, strengthening the chapter's network and operational capacity.

PROJECTS

Bono — Carbon Footprint SaaS Platform — Mexico City, 2025

React, JavaScript, HTML/CSS, Frontend Development

- Won company hackathon by architecting a SaaS platform for corporate and industrial carbon footprint calculation, securing a direct internship offer through demonstrated product execution.
- Designed and developed 10+ production React components with real business logic, collaborating with the technical team on user-facing features from requirement definition to deployment.

Downhill México — Full Stack Web Platform — Mexico City 2025

JavaScript, HTML/CSS, PostgreSQL, REST APIs

- Designed and developed an end-to-end full stack platform for a mountain bike competition organization, contributing to a 30% increase in registered competitors within the first season of platform deployment.
- Engineered frontend features including event calendar, athlete profile management, real-time standings table, photo gallery, and news section.
- Implemented backend architecture including session-based authentication, SQL database management, REST API integration, data persistence, and server-side push notifications.

Authentication Log Search System — Mexico City 2025

C++, Merge Sort, Binary Search, Big O Analysis

- Conducted a comparative performance study on sorting and search strategies by engineering a C++ system that processed ~20,000 security log entries with timestamp-based interval and count retrieval.
- Evaluated two approaches via a polymorphic interface: binary insertion sort ($O(n)$ per insert, continuously sorted) vs. Merge Sort on full dataset load ($O(n \log n)$), both leveraging binary search for $O(\log n)$ retrieval, empirical benchmarks compared single-insert and batch-insert scenarios to validate theoretical complexity predictions.

Streaming Catalog Application — Mexico City 2024

C++, OOP, CSV File I/O

- Streaming catalog application built on an inheritance hierarchy, applying OOP principles including encapsulation and polymorphism.
- Implemented persistent storage via CSV file I/O, loading, filtering by genre, user ratings with running average calculation, and writing changes back to disk.

Music Recommendation System — Mexico City 2024

Python, Unsupervised ML, Pandas, Cosine Similarity

- Engineered a recommendation engine using cosine similarity across 500+ tracks, with preprocessing pipelines to normalize and compare user taste profiles.

SKILLS

- Languages:** C++, Python, JavaScript, HTML, CSS, SQL, Matlab
- Frameworks & Tools:** React, Node.js, Git, VS Code
- Concepts:** OOP, Data Structures & Algorithms, Big O Analysis, REST APIs, Client Requirements Analysis, Software Documentation
- Soft Skills:** Stakeholder management, Technical communication, Cross-functional leadership, Delivery under pressure, Autonomous execution
- Languages (spoken):** Spanish (native), English (advanced — technical & professional)
